Dear **Srinivas Sathian**,

I hope this message finds you well.

I'm reaching out to express my enthusiastic interest in the **Electronics Engineering** internship opportunity at **Process Pumps**. Your team's innovative work in the *Industrial Machinery Manufacturing* sector strongly resonates with my passion for robotics and embedded systems, and I believe my background in Electrical and Electronics Engineering aligns well with your vision.

As a B.Tech student in EEE at UVCE, I have built a strong technical foundation in:

- **Programming:** C, C++, Embedded C
- **Hardware:** Assembly Language, Microcontrollers
- **Tools:** Arduino IDE, STM32Cube IDE, Keil uVision
- **Simulation & Design:** Verilog, MATLAB Script, Simulink

I've led IoT-based projects and mentored peers in building embedded systems, which has enhanced my ability to integrate software and hardware effectively.

I'm particularly excited to apply my skills in *AC Machines*, *DC Machines*, *Embedded System*, and *C/C++* to support your mission at Process Pumps. One of my key projects involved designing an *autonomous flying machine for pesticide spraying*, which attracted over 200 qualified leads—showcasing both technical execution and market relevance.

I would be thrilled to bring this same drive and creativity to your team while learning from the professionals at **Process Pumps**.

Thank you for considering my application. My resume is attached for your review, and I look forward to the opportunity to further discuss how I can contribute.

Warm regards,

Yuvaraj K
